Introduction

Amazon Web Services (AWS) is a cloud platform that provides on-demand access to compute, storage, and databases over the internet on a pay-as-you-go basis.

This guide helps you get started with AWS through the essential steps to:

- Create an AWS account
- Access the AWS Management Console
- Secure your AWS account
- Configure billing alerts

Prerequisites

- A valid email address
- A phone number
- A credit or debit card
- Internet access

Getting Started

This section explains how to create an AWS account and complete the initial setup.

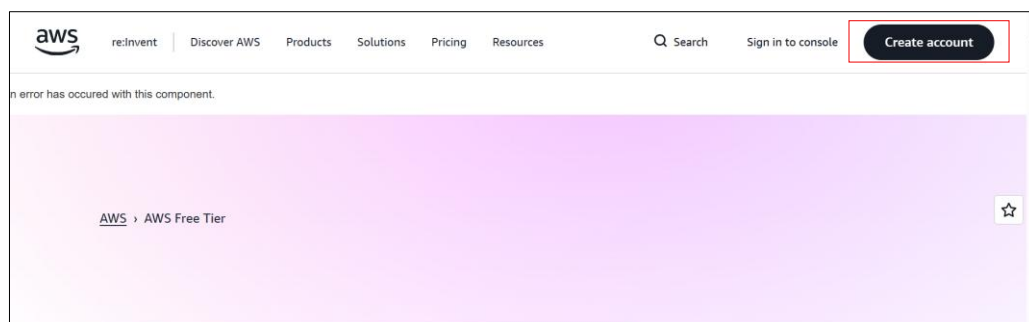

The account creation process involves several steps, including providing account information, adding contact details, setting up payment information, and verifying your identity.

Create an AWS Account

In the AWS cloud, you need an account to access AWS services and resources.

To create an account, perform the following steps:

1. Go to the AWS homepage.
2. Click **Create account**.

The **Sign up** page appears.

Provide Account Information

On the **Sign up** page, provide the following account information:

1. In the **Root user email address** field, enter your email address.
2. In the **AWS account name** field, enter a name for your account.

3. Click **Verify email address**.

Try AWS at no cost for up to 6 months

Start with USD \$100 in AWS credits, plus earn up to USD \$100 by completing various activities.

Sign up for AWS

Root user email address
Used for account recovery and as described in the [AWS Privacy Notice](#)

AWS account name
Choose a name for your account. You can change this name in your account settings after you sign up.

Verify email address

OR

Sign in to an existing AWS account

This site uses essential cookies. See our [Cookie Notice](#) for more information.

AWS sends a verification code to your email address, and the **Verification Code** page appears.

4. In the **Verification Code** field, enter the code.
5. In the **Password** field, enter and confirm your password.
6. Click **Continue (step 1 of 5)**.

Sign up for AWS

Create your password

It's you! Your email address has been successfully verified.

Your password provides you with sign in access to AWS, so it's important we get it right.

Root user password

Confirm root user password

Continue (step 1 of 5)

OR

Sign in to an existing AWS account

The **Contact Information** page appears and begins step 2 of the account setup process.

Add Contact Information

On the **Contact Information** page, perform the following steps:

1. Select **Personal** or **Business** as the account type.
2. In the **Full Name** field, enter your name.
3. In the **Country Code** list, select your country code.
4. In the **Phone Number** field, enter your phone number.

5. In the **Country or Region** field, select your country or region.
6. In the **Address** field, enter your address.
7. In the **City** field, enter your city.
8. In the **State, Province, or Region** field, enter your state, province, or region.
9. In the **Postal Code** field, enter your postal code.
10. In the **Customer Agreement** section, read and accept the agreement.
11. Click **Continue (step 2 of 5)**.

The **Billing Information** page appears and begins step 3 of the account setup process.

Add a Payment Method

On the **Billing Information** page, add a payment method.

You can choose either a Credit/Debit card or UPI AutoPay.

For **Credit or Debit Card**, perform the following steps:

1. In the **Payment Method** section, select **Credit or Debit Card**.
2. In the **Expiration Date** field, enter the card expiration date.
3. In the **Security Code** field, enter the card security code.
4. In the **Cardholder's Name** field, enter the cardholder's name.
5. Click **Verify and Continue (step 3 of 5)**.

AWS sends a **One-Time Password (OTP)** to your registered mobile number.

6. In the **One-Time Password** field, enter the OTP.
7. Click **Submit**.

For UPI **AutoPay**, perform the following steps:

1. In the **Payment Method** section, select **UPI AutoPay**.
2. In the **UPI ID** field, enter the **UPI ID**.
3. Click **Verify and Add**.
4. In the **Billing Address** section, select **Use my contact address** or **Use a new address**.
5. Click **Verify and Continue (step 3 of 5)**.

The **Confirm Your Identity** page appears and begins step 4 of the account setup process.

Confirm Your Identity

AWS verifies your identity before activating your account.

On the **Confirm Your Identity** page, perform the following steps:

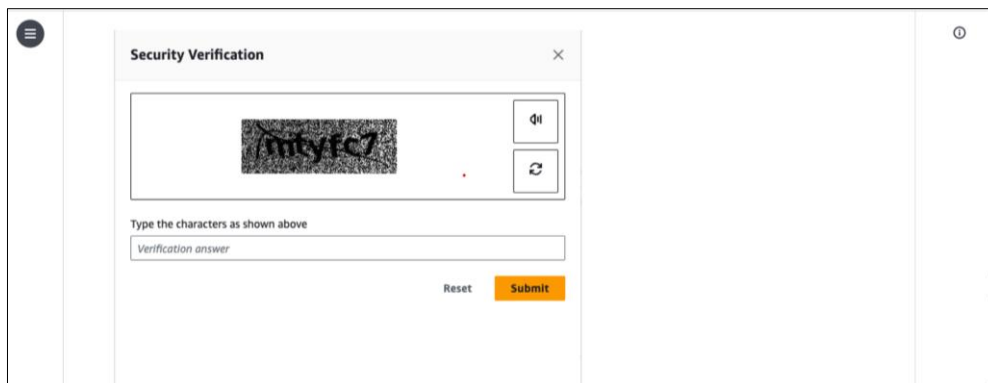

1. In the **Primary Purpose** section, select the option that describes your use of AWS.
2. In the **Ownership Type** field, select the ownership type.
3. In the **Document Type** menu, select your document type.
4. In the **PAN Number** field, enter your PAN number.
5. Click **Continue**.
6. In the **Date of Birth** field, enter your date of birth.
7. Click **Continue (step 4 of 5)**.

To verify your phone number, perform the following steps:

8. Select **Text message (SMS)** or **Voice call**.
9. In the **Country or Region Code** list, select your country or region code.
10. In the **Mobile Phone Number** field, enter your mobile number.
11. Click **Send SMS (step 4 of 5)**.

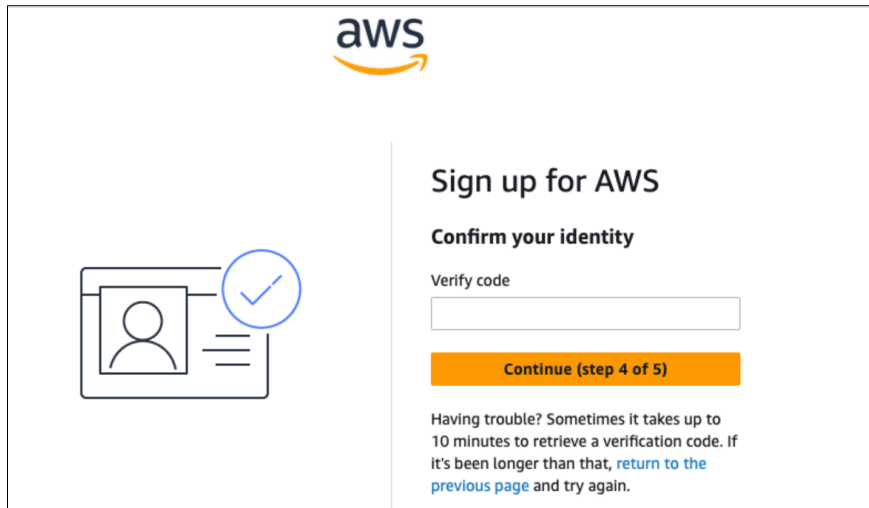

A **Security Verification** dialog box appears.

12. In the **CAPTCHA** field, enter the code.
13. Click **Submit**.

AWS sends a verification code.

14. In the **Verification Code** field, enter the code you receive.
15. Click **Continue (step 4 of 5)**.

The image shows the AWS 'Sign up for AWS' page. At the top center is the AWS logo. On the left side, there is a graphic of a document with a person icon and a blue checkmark in a circle. On the right side, the heading 'Sign up for AWS' is followed by the sub-heading 'Confirm your identity'. Below this is a 'Verify code' label and an empty text input field. Under the input field is an orange button labeled 'Continue (step 4 of 5)'. At the bottom right, there is a paragraph of text: 'Having trouble? Sometimes it takes up to 10 minutes to retrieve a verification code. If it's been longer than that, [return to the previous page](#) and try again.'

The **Support Plan** page appears and begins step 5 of the account setup process.

Choose a Support Plan

A support plan provides access to AWS technical support and customer service.

You can choose one of the following plans:

- **Basic (Free):** Provides 24/7 customer service and access to Free Tier benefits.
- **Business/Developer (Paid):** Provides quick technical support and additional features.

Beginners can select the Basic (Free) support plan.

On the **Support Plan** page, perform the following steps:

1. Select the support plan you want.
2. Click **Complete sign up**.

Select a support plan

Choose a support plan for your business or personal account. [Compare plans and pricing examples](#). You can change your plan anytime in the AWS Management Console.

☒ **Basic support - Free**

- Recommended for new users just getting started with AWS
- 24x7 self-service access to AWS resources
- For account and billing issues only
- Access to Personal Health Dashboard & Trusted Advisor

☐ **Developer support - From \$29/month**

- Recommended for developers experimenting with AWS
- Email access to AWS Support during business hours
- 12 (business)-hour response times

☐ **Business support - From \$100/month**

- Recommended for running production workloads on AWS
- 24x7 tech support via email, phone, and chat
- 1-hour response times
- Full set of Trusted Advisor best-practice recommendations

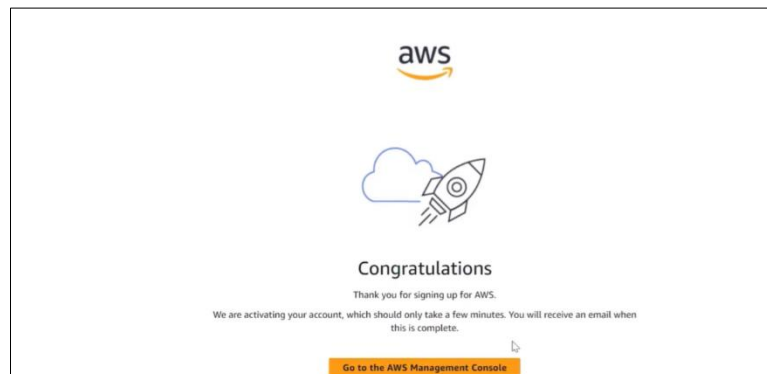

Need Enterprise level support?

From \$15,000 a month you will receive 15-minute response times and concierge-style experience with an assigned Technical Account Manager. [Learn more](#)

[Complete sign up](#)

AWS activates your account and sends you a welcome email.

Access the AWS Management Console

The AWS Management Console allows you to manage and monitor AWS services and resources.

To access the AWS Management Console, perform the following steps:

1. On the confirmation page, click **Go to the AWS Management Console**.
2. On the console page, click **Sign in to the Console**.

The **Sign in** page appears.

Two sign in options are available:

- **Root User:** The account owner.
- **IAM User:** A user created by the root user or an administrator.

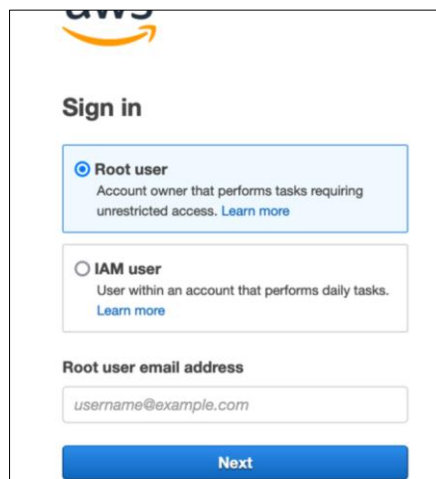

Sign In as the Root User

To sign in to the AWS Management Console for the first time, perform the following steps:

1. On the **Sign in** page, select **Root User**.

Note: Use the Root user option for your initial login.

2. In the **Root User email address** field, enter your email address.
3. Click **Next**.

The screenshot shows the AWS 'Sign in' page. At the top is the AWS logo. Below it, the heading 'Sign in' is centered. There are two radio button options: 'Root user' (selected) and 'IAM user'. The 'Root user' option has a description: 'Account owner that performs tasks requiring unrestricted access. Learn more'. The 'IAM user' option has a description: 'User within an account that performs daily tasks. Learn more'. Below these options is a text input field labeled 'Root user email address' containing the placeholder text 'username@example.com'. At the bottom is a blue button labeled 'Next'.

4. In the **Password** field, enter your password.
5. Click **Sign in**.

The image shows the AWS Root user sign-in page. At the top is the AWS logo. Below it is the heading "Root user sign in" with an information icon. The email field is pre-filled with "someone@example.com". The password field is labeled "Password" and has a "Forgot password?" link. The password field contains a series of dots and a cursor. A blue "Sign in" button is at the bottom.

Sign in

The **AWS Console Home** page appears.

Secure Your Account

You can secure your AWS account from unauthorized access.

Recommended security practices include:

- Enabling **Multi-Factor Authentication (MFA)** for the root user
- Creating an **IAM administrator user** for daily tasks
- Setting up **billing alerts**

Enable MFA for the Root User

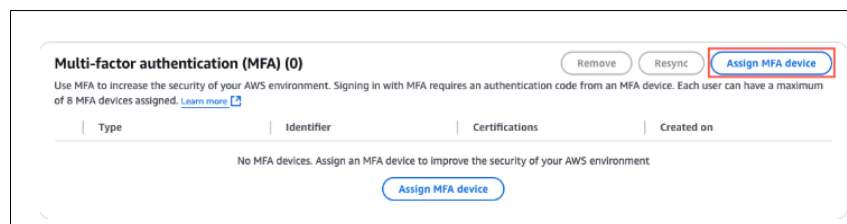

You can secure your root user account with MFA.

To enable MFA, perform the following steps:

1. On the **Console Home** page, click your account name.
2. In the dropdown list, select **Security credentials**.

The **Security credentials** page appears.

3. In the **Multi-Factor Authentication (MFA)** section, click **Assign MFA device**.

The **MFA device** page appears.

4. In the **Device name** field, enter a device name.
5. In the **Device options** section, select **Authenticator app**.
6. Click **Next**.

The **Set up device** page appears.

7. On the **Set up device** page, click **Show QR code**.
8. Scan the QR code using an authenticator app.
9. In the code field, enter the two verification codes generated by the app.
10. Click **Add MFA**.

The confirmation message appears.

Your root account is now secured.

Create a Daily Admin User

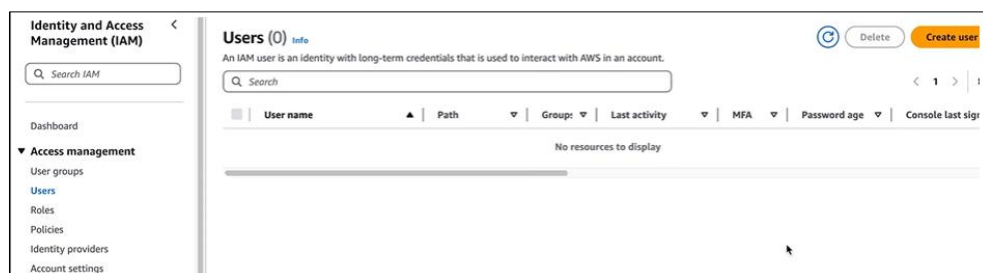

A daily admin user allows you to perform everyday tasks in AWS without using the root account.

To create an IAM admin user, go to the **Console Home** page and perform the following steps:

1. In the console search bar, search for IAM.
2. Open the **IAM Dashboard**.

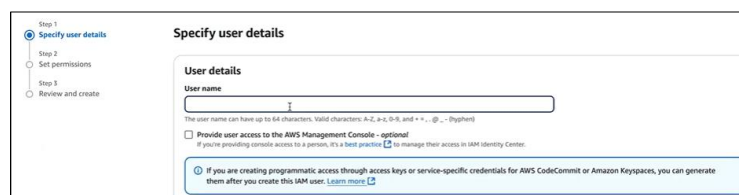

3. In the left navigation pane, click **Users**.
4. In the right pane, click **Create user**.

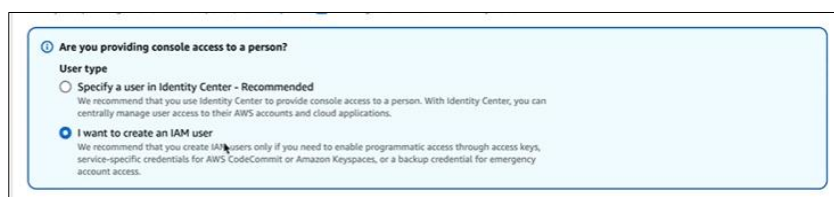

The **Specify user details** page appears.

5. In the **User name** field, enter a user name.
6. Select **Provide user access to the AWS Management Console**.

The Providing console access box appears.

7. In the **providing console access** section, select **I want to create an IAM user**.

8. In the **Custom password** field, enter a password.
9. Click **Next**.

The **Set permissions** page appears.

10. In **Permissions options**, select **Attach policies directly**.

11. In the **Policy list**, select **AdministratorAccess**.
12. Click **Next**, and then **Create user**.

The **Retrieve password** page appears.

13. On the **Retrieve password** page, click **Download.csv file**.

This file contains your Console sign in URL.

14. Click **Return to users list**.

You can now use the administrator user for daily tasks.

Set Up a Billing Alarm

A billing alarm notifies you when your AWS charges exceed a specified limit.

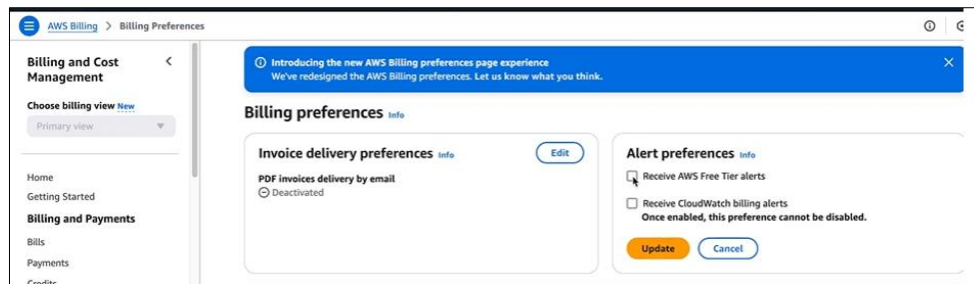

To set up a billing alarm, go to the **Console Home** page and perform the following steps:

1. In the console search bar, search for **Billing and Cost Management**.

The **Billing and Cost Management home** screen appears.

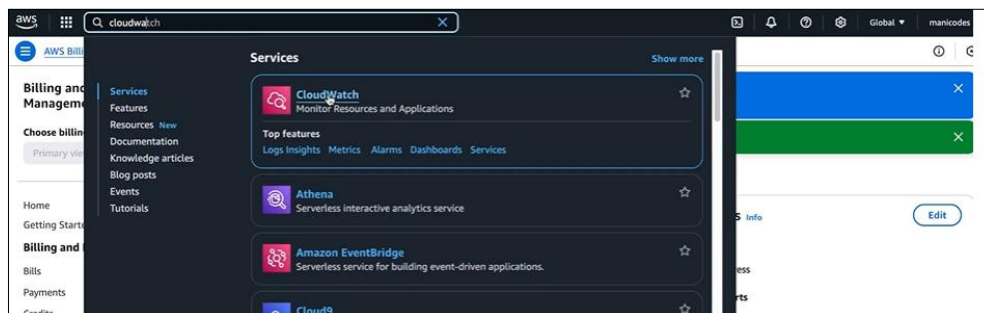

2. In the left pane, click **Billing Preferences**.

The **Billing preferences** page appears.

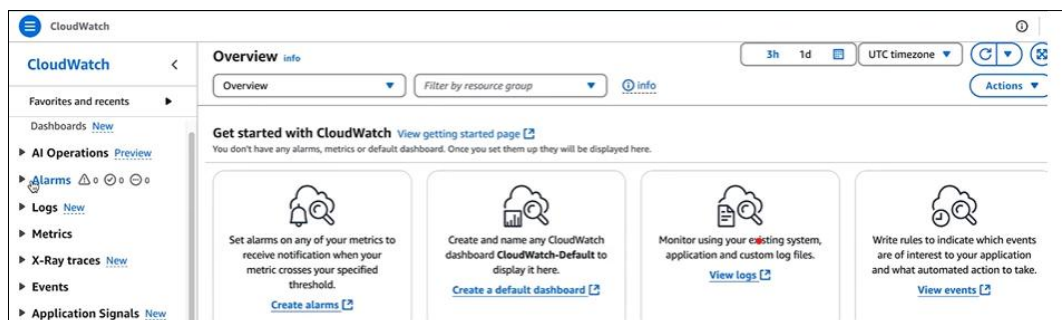

3. In the **Alert preferences** section, enable the following options:
 - **Receive PDF Invoice by Email.**
 - **Receive Free Tier Usage Alerts.**
 - **Receive Billing Alerts.**
4. Click **Update**.
5. In the search bar of the same page, enter and select **CloudWatch**.

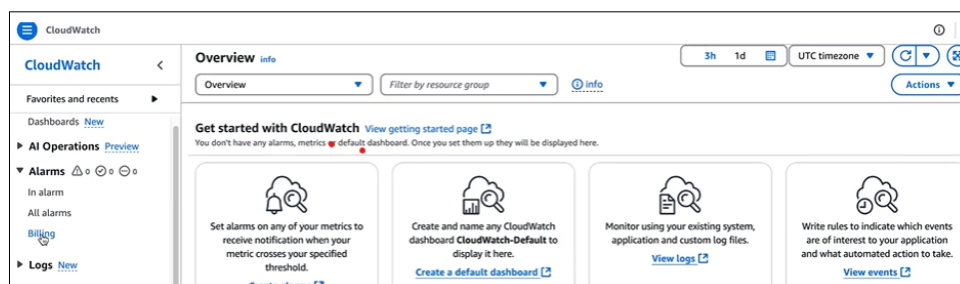

The **CloudWatch** page appears.

6. In the left pane, click **Alarms**.

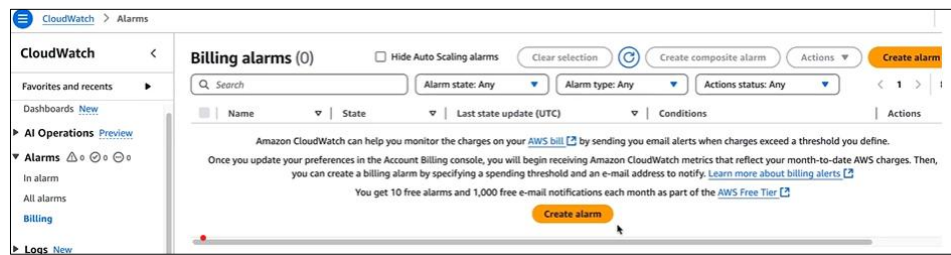

7. In the **Alarms** menu, select **Billing**.

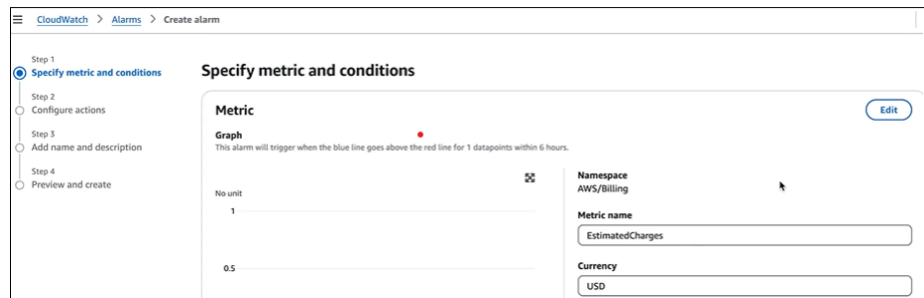

The **Billing alarms** page appears.

8. In the right pane, click **Create alarm**.

The **Specify metric and conditions** page appears.

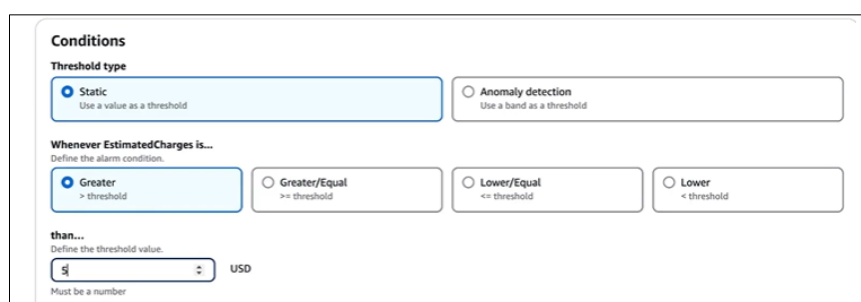

9. On the **Specify metric and conditions** page, perform the following steps:

- In the **Metric name** field, select **EstimatedCharges**.
- In the **Currency** field, enter USD.
- In the **Statistics** field, select Maximum.
- In the **Period** field, select the period.

10. In the **Conditions** field, select the following options:

- **Static** as the threshold type.
- Select the **Estimated charges** option.
- Set the threshold value.

11. Click **Next**.

The **Configure actions** page appears.

12. In the **Notification** section, select **Create** topic.

13. In the **Email** field, enter your email address and click **Next**.

The **Add name and description** page appears.

14. In the **Alarm name** field, enter the name.

15. Click **Next**.

The **Preview and create** page appears.

16. In the right pane, check the preview.

17. Click **Create alarm**.

AWS sends a confirmation email. Click the link in the email to activate the notification.

Your billing alarm is now set.

You can now access AWS services.
